TMPM DIGITAL PRODUCTS & AUTOMATION

TMPM Programme & Project Delivery Hub

From an idea to delivery and benefits.

Bring learning, documents, governance and progress into a coherent way of working.

Academy

Build practical understanding of the delivery stages and the decisions behind the documents.

Toolkit

Use the Project Document Roadmap to explore stage-appropriate document templates.

Governance and Delivery

Agree decision gates, responsibilities, milestones, risks, reporting and benefits around the programme.

Try the sample

Change the project scale, choose a stage and preview a document in the Project Document Roadmap.

Open the working sample

IMPLEMENTATION / SCOPE AND RESPONSIBILITIES

Build around your organisation.

Start with one workflow and agreed users, then evaluate before expanding.

What you provide

- Your delivery stages, governance and document templates.
- Project types, reporting needs and measures of success.
- User roles, existing planning tools and system constraints.

Who needs to be involved

A sponsor and service owner, representative users and the relevant IT and information governance leads. Bring operational and records expertise into decisions about permissions, retention and workflow.

What we agree together

Scope, access roles, source systems, configuration, training, support, licences, costs and success measures. Confirm what remains manual and where any integration or AI support is appropriate.

Important scope distinction

Connected timelines, automated reporting, transcript-to-actions and board-paper drafting require a separately scoped and tested implementation. The roadmap is a document-stage explorer.

Discuss a pilot

Explore the sample, then agree the implementation your team needs.
